

BMFA Electric Indoor Masters Team Event

The Team event is primarily about spectator entertainment with the emphasis on the team's pilot ability. This could be demonstrated with a synchronised routine or a freestyle flight but must show some interaction between team member's models.

Flights shall be a maximum of two minutes long.

Music can be selected by the team and supplied to the organisers or can be chosen from the available music supplied by the organisers.

Model specifications shall be the same as those specified for F3P-AM.

The competition will be based on head to head flights with the audience selecting the winner by a majority vote. The exact format will depend on the number of entries but is likely to consist of heats, semi-final and final.

At no time must the model cross the safety line. This will result in an immediate termination of the flight.
